

Now you can have **both...**  
**Network Security and Performance.**

## Managed Security Services

Many businesses today are forced to choose between network security and network performance. Continuously increasing levels of attacks—viruses, worms, intrusions, malicious content and other threats—require the use of a broad range of network security services to provide sufficient protection. At the same time, the availability and use of faster broadband services is becoming commonplace. This means that today's firewall must scan ever-increasing amounts of network traffic in greater depth than ever before. As a result, businesses are forced to compromise either firewall performance or network security just to keep their business functioning. Ganuch Inc solves these issues by combining multiple network and security functions in a single solution that is easy to manage and deploy.

## What it does:

**Malicious traffic never has a chance to infect your network! Right at the gateway level we:**

- Utilize the latest Antivirus, Antispam, Antispyware, Intrusion Detection and Prevention Service.
- Utilize web filtering to prevent access to unwanted websites.
- Utilize VPN and SSL-VPN technologies which decontaminate vulnerabilities and malicious code without user intervention.

**We have the ability to respond remotely to service requests and furnish you with daily reports... eliminating the need for a site visit and saving you time and money in the process!**

**Includes 24/7 Security Monitoring required to help prevent attacks on your network and also provides you with the specialized skills that are typically very costly!**

**Proactive Network Compliance. SOX, HIPPA, PCI and ISO17799**

## What this means to you

**Increased Uptime • Reduced Service Calls • Productivity Savings • Automatic Updates  
Regulatory Compliance • Bandwidth Optimization**
